Professional Summary

Computer Science undergraduate specializing in Data Engineering and Backend Development, with experience building scalable data platforms, distributed backend services, and AI-ready infrastructure. Proficient in developing data pipelines, REST APIs, data warehousing solutions, and modern system architectures that power reliable, high-performance applications. Passionate about building production-grade backend and data systems that bridge Software and Data Engineering.

Education

KL University 2023 – Present
B.Tech (Honors) in Computer Science and Engineering (CGPA: 9.4 / 10) *Hyderabad, Telangana*

- **Relevant Coursework:** Data Structures & Algorithms, Database Management Systems, Big Data Technologies, Operating Systems, Software Engineering, Computer Networks, Object-Oriented Programming

Sri Chaitanya Junior College 2021 – 2023
Intermediate (MPC) ***Percentage: 94%*** *Hyderabad, Telangana*

Oasis School of Excellence 2010 – 2021
Secondary Education ***Percentage: 87%*** *Hyderabad, Telangana*

Projects

Kisegan — Production-Oriented Streaming Data Platform *(Kafka, PySpark Structured Streaming, Docker, Python)*

- Built a production-oriented real-time weather streaming platform using Apache Kafka, PySpark Structured Streaming, and Docker, ingesting live events across 30+ locations through distributed event-driven pipelines.
- Developed schema-driven backend data processing workflows with normalization, 4 data quality validations, and lightweight feature engineering to ensure reliable downstream processing.
- Designed a scalable storage layer by persisting validated streaming events as partitioned Parquet datasets on MinIO, enabling efficient historical querying and analytics-ready data access.
- Implemented a modular producer-consumer architecture with fault-tolerant stream processing, improving maintainability and extensibility of the platform.

Reinex — Distributed Ride Analytics Warehouse *(dbt, PostgreSQL, Dimensional modelling, Python)*

- Built a production-style ELT analytics platform using dbt, PostgreSQL, and Python, transforming 200 ride events into analytics-ready warehouse models through Bronze, Silver, and Gold layers.
- Developed reusable backend transformation pipelines implementing data cleansing, validation, semantic modeling, and automated warehouse testing with 13+ dbt quality checks.
- Designed a dimensional warehouse using a 4-dimension, 1-fact star schema to support business analytics including demand forecasting, revenue trends, and trip performance.
- Optimized SQL transformations and modular data models for maintainability, scalability, and efficient analytical query performance.

Tech Stack

Languages: Python, Java, C, JavaScript, SQL, HTML/CSS
Frameworks & Libraries: Apache Kafka, PySpark, Node.js, Express.js, FastAPI, React.js
Databases: MySQL, MongoDB, PostgreSQL
Tools & Technologies: Git, GitHub, Postman API, Thunder Client, VS Code, Visual Studio, Docker, dbt, MinIO
Cloud Platforms: Microsoft Azure, AWS Cloud Services, Snowflake, Databricks

Achievements

Microsoft Certified: Azure Data Fundamentals: Gained foundational knowledge of Azure data concepts and services.
GitHub Foundations: Learned essential repository management and version control fundamentals.
AWS Certified Cloud Practitioner: Gained foundational knowledge of AWS cloud services, architecture, security, pricing, and core cloud concepts.
Career Essentials in Generative AI – Microsoft & LinkedIn: Developed core understanding of generative AI.
