

# GANGUMOLU SRAVANI

7396107963 | gangumolusravani44@gmail.com | <https://www.linkedin.com/in/gangumolu-sravani-2884a0234/>

## SUMMARY

Highly motivated and adaptable professional seeking a challenging role at a reputable organization where I can utilize my diverse skills and expertise to contribute for impactful results. I'm a continuous learner committed to personal and professional growth .

## EDUCATION

|                                                                                            |                                         |
|--------------------------------------------------------------------------------------------|-----------------------------------------|
| <b>KL University Hyderabad</b><br><i>B.Tech, Electronics and Communication Engineering</i> | CGPA : 9.12/10<br><i>2021 - Present</i> |
| <b>Sri Chaitanya Jr. College</b><br><i>Intermediate</i>                                    | Percentage : 96.2<br><i>2019 - 2021</i> |
| <b>Sri Venu Gopala Swamy High School</b><br><i>School</i>                                  | CGPA : 9.0<br><i>2019</i>               |

## SKILLS

- **Programming Languages:** Python, OOPs with Java, C
- **Technical Skills:** Cyber Security,Basics of VLSI, Machine Learning, SQL
- **Softwares/Tools:** Cisco packet tracer,deep sound,Microsoft Excel, Power BI, Arduino Uno, Kali Linux, LT Spice, Proteus
- **Web Development:** HTML, CSS
- **Soft Skills:** Team work, Time Management

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |                               |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------|
| <b>ALCO-DET INTEGRATED WITH BLYNK IOT</b><br>• Softwares-Blynk IOT, Arduino(ESP-32), Proteus<br>• Developed a cutting-edge Smart Alcohol Level Detecting IoT device integrated with Blynk IoT platform and ESP-32 microcontroller. This innovative device serves as a crucial tool in promoting road safety and responsible alcohol consumption.                                                                                                                                                                                                                                              | <i>ESP-32 Microcontroller</i> |
| <b>PHISHING LINK DETECTION</b><br>• Softwares and Libraries-Pycharm, Beautiful Soup, sklearn,HTML,CSS,Javascript<br>• Created Phishing pages of few websites such as google,instagram,facebook,snapchat etc to show how actually phishing websites look like and this project involves developing a machine learning model to identify and flag phishing links. It learns patterns from known phishing URLs and uses them to classify new URLs as either legitimate or potentially harmful.<br>• It uses algorithms like Random Forest, SVM, Gaussian Naive Bayes, Ada Boost to classify URLs | <i>Machine Learning</i>       |
| <b>SMART VEHICLE TURNING INDICATOR</b><br>• Softwares-Arduino<br>• Arduino-based device uses tilt, IR sensors and code to automate an indicator sign, displaying relevant information                                                                                                                                                                                                                                                                                                                                                                                                         | <i>Arduino</i>                |
| <b>AUTOMATIC DOOR OPENING SYSTEM</b><br>• Softwares-8051-microprocessor<br>• An 8051-microprocessor-based automatic door opener is a device that uses a microcontroller to detect the presence of people and open doors automatically.                                                                                                                                                                                                                                                                                                                                                        | <i>Arduino</i>                |
| <b>IMAGE STEGNOGRAPHY</b><br>• Softwares-Pycharm<br>• In this project developed using Python, a message is securely embedded within an image by strategically altering selected pixels, determined by an encryption algorithm.                                                                                                                                                                                                                                                                                                                                                                | <i>Python</i>                 |

## INTERNSHIP EXPERIENCE

---

### Cyber Security Intern

May'23 – July'23

*AICTE - PALO ALTO NETWORKS*

- Completed a 10-week internship, actively engaging in training sessions in cybersecurity, gaining proficiency in cryptography, networking, and cyber attacks.

## CERTIFICATIONS

---

- \* Oracle Cloud Associate Architect
- \* Red Hat Certified Enterprise Application Developer
- \* MACHINE LEARNING -Internshala
- \* AICTE Cybersecurity(cohort-6)
- \* Ethical Hacking-IIT Hyderabad

## WORKSHOPS

---

- \* **Ethical Hacking-IIT Hyderabad** –Participated in a two-day workshop on ethical hacking at IIT Hyderabad, immersing myself in a variety of hacking tools and techniques.
- \* **Swecha Organization** - Identified local challenges in Yenakapalle village and proposed a smart playground concept that utilizes play energy to generate electricity, seamlessly blending recreation with sustainable power solutions.

## RELATED GROUNDWORK

---

- \* **Electronics** - Microcontrollers and Microprocessors, Wireless Communication, Digital Logic And Processors, Communication Signals and System Design, Electronic Devices and Circuit Design **Tools-** Arduino IDE, MATLAB, Lt Spice,
- \* **Cyber Security** - Cryptography, Networking, CCloud Security, Network Security, Basics of Blockchain **Tools-** Kali Linux, Nmap, Anonsurf, Wireshark,deep sound.

## EXTRA-CURRICULAR ACTIVITIES

---

- \* As a code mentor, I guided first-year and second-year undergraduates in their programming
- \* As a SAC(Student Activity Centre) member, I volunteered for many events.
