

Internship Openings

AI Engineering & Design · Remote · Immediate

About Protofine

Protofine.ai is an early-stage artificial intelligence company incubated at T-Hub, Hyderabad, and recognised by DPIIT, backed by Google for startups and AWS. We are building COS (Cognitive Operating System) the metacognition layer for AI.

Language models are designed to produce fluent, plausible responses, but they have no inherent means of judging whether those responses are correct. A model cannot reliably evaluate its own output, so errors frequently reach users with full confidence and no warning. This is not a shortcoming of any single model; it is a structural limitation of how language models work.

COS addresses this from outside the model. It reviews AI output before it reaches a person identifying responses that are confidently incorrect, fabricated, or internally inconsistent and produces an auditable record of every check. The result is AI that organisations can trust and defend in high-stakes work.

Program Overview

- **Duration:** 3 months
- **Start:** Immediate - rolling intake from June 2026
- **Location:** Remote
- **Compensation:** Unpaid during the internship period
- **Conversion:** Exceptional performers may be converted to a paid role at any point during the internship, and will also be offered internship extensions and full-time positions.
- **We are looking for** self-starters who take ownership, work independently with async guidance, and ship real work.

Backend Engineering Intern

2 positions · Remote

Build and maintain the core COS API and the systems that power request handling, data storage, and usage tracking. You will own real production infrastructure.

Key Responsibilities

- Design, build, and maintain REST API endpoints using FastAPI
- Implement data storage, usage tracking, and rate-limiting logic
- Contribute to the request-handling and validation pipeline
- Deploy, monitor, and maintain services on Google Cloud Platform
- Write clean, well-tested, and documented code

Requirements

- Strong fundamentals in Python
- Solid understanding of REST APIs, HTTP, and JSON
- Proficiency with Git and collaborative version control
- Ability to work independently and communicate clearly in an async setup

Good to Have

- Hands-on experience with FastAPI or Flask
- Exposure to Google Cloud Platform (Cloud Run, Firestore)
- Familiarity with CI/CD pipelines and automated testing

AI / ML Engineering Intern

2 positions · Remote

Work on the core intelligence of COS - the layered logic that evaluates AI outputs and catches what models miss in themselves. This is hands-on applied LLM work, not theory.

Key Responsibilities

- Develop and refine multi-stage validation logic, from rule-based checks to LLM-driven analysis
- Design and iterate on prompts for detection and correction
- Run evaluations and benchmark model performance on precision and recall
- Integrate and test multiple LLM providers
- Document findings and contribute to improving detection quality

Requirements

- Strong fundamentals in Python
- Hands-on familiarity with large language models and their APIs
- A good instinct for prompt engineering and iteration
- An analytical, evaluation-driven mindset

Good to Have

- Experience with Gemini, Claude, or OpenAI APIs
- Exposure to model evaluation or fine-tuning workflows
- Understanding of core NLP concepts
- Understanding of core NLP concepts

Web Designer

1 position · Remote

Own the look and feel of Protofine's public presence of our company and product websites. You will

take rough direction and turn it into polished, live web experiences that signal credibility for a serious AI company.

Key Responsibilities

- Design and build responsive, professional web pages for our company and product sites
- Translate brand direction into clean, modern, conversion-focused layouts
- Publish and iterate on live sites using modern web tools
- Maintain visual consistency across all public-facing surfaces

Requirements

- A strong portfolio of web design work, with live links preferred
- Proficiency with modern design-and-build tools such as Webflow or Framer or design skills paired with front-end implementation
- A sharp eye for layout, typography, and visual hierarchy
- Ability to take direction and work independently

Good to Have

- Experience designing for startups or technology products
- Basic familiarity with HTML and CSS
- Understanding of conversion and landing-page best practices

How to Apply

Send your CV with a link to your GitHub profile or portfolio. Shortlisted candidates receive a short practical task, we care more about what you can build than what your resume says.
